## Bamboo pulp?

Yes.

Bamboo has become an alternative source for pulp and paper industry. Bamboo fibre has long fibre and it has been used to produce cellulosic fibres for paper, which makes this dissolving pulp raw material ideal for food packaging. The pulping process is Pre-hydrolysed-Kraft and bleaching of pulp with environmental friendly technology.

## What about bagasse?

Bagasse is the fibrous residue left over when sugarcane is squeezed for its juice. It is a sustainable and fast-growing resource that is ideal to be processed for composite material.

## Compostable?

You bet!

Compostable means it breaks down to carbon dioxide, water, inorganic compounds, and biomass at a rate similar to paper and breaks down into small pieces in about 90 days while leaving no toxic residue. Both bamboo and bagasse are natural products and are compostable. Look for this icon!

## Certifications?

Our products are certified by Biodegradable Products Institute (BPI) as meeting ASTM D6868 to provide assurance of compostability, this includes certifications for Hazard Analysis and Critical Control Points (HACCP) and Good Manufacturing Practices (GMP). Not only that! Our products meet BRC/IoP Global Standard for Packaging and Packaging Materials. All these to ensure our products are manufactured according to quality standards.
